

BIOGRAPHY

of

Dennis Keisic

Mr. Dennis Keisic attained recognition as one of the leading manufacturing engineers in the automotive industry. Working for highly technical groups at companies such as GKN Automotive and General Motors, he found new ways to improve their products. Also, he excelled in explaining the connection between “Six-Sigma” quality methods and Weibull as an adjunct instructor in Weibull Engineering for the Society of Automotive Engineers. Dennis invented the conversion chart between standard Six-Sigma requirements based only on the bell-curve distribution and the equivalent in terms of Weibull or any other statistical model. Dennis left a legacy of hard work, breakthrough insight, good humor, and enlightenment in his wake.
